## BOARD OF TRADE

### IS GETTING BUSY

SIXTEEN NEW MEMBERS REPORTED TO DATE; QUESTION-AIRE RE OIL & GAS

A regular meeting of the Board of Trade on Friday last, saw a sizeable attendance with Vice-President Macneil in the chair.

Minutes of the previous meeting were read and adopted. On a motion by Messrs Cuthbertson-Hannah it was resolved that the usual banking resolution be confirmed with, authorizing the president and secretary to sign cheques, etc.

The chairman of the finance committee, Mr. J. Cuthbertson, reported having sixteen new members to date.

Mr. E. C. Cuthbertson of the oil and gas section, reported having numerous requests for samples of oil and enquiries re the different oil companies in the field.

It was moved by Messrs McLeod-Hannah—that the chairman of the oil and gas committee together with the president and secretary, draw up a questionnaire and submit the same to the various oil companies operating in this field for them to fill up, so that the Board will be able to have data on hand to answer questions fully and correctly.

Discussion then took place regarding the auto camp, a monthly luncheon scheme, a sign scheme, etc., and these items were gone into very fully but no definite action was taken and the meeting adjourned.

Several of our farmers were on the land at the beginning of last week and possibly the earliest at work this season was Lou Hedlund at Health and L. Roy of the same district.

We understand that Miss M. Hart, who formerly taught school at Fabyan has been accepted for a similar post at Lloydminster.

Mr. J. Gano, was up from Unity last week looking after his farm and property interests here.

## ASTER DEVOTIONAL SERVICES DURING HOLY WEEK

On Monday, Tuesday and Wednesday of next week, March 25th, 26th and 27th the congregations of the Anglican, Presbyterian and United churches will unite in devotional services in keeping with the near approach of Easter. The Revs. Trudell, Brooker and Wainwright of their respective churches will co-operate in these services each minister being in charge of one service. The gatherings which will be held on Monday in the United church, on Tuesday in St. Andrew's, and on Wednesday in St. Thomas' will commence each evening at 8 p.m., and an earnest invitation is given to members and adherents of all denominations to attend. Church worship on Good Friday will conform to the customs and desires of the separate congregations.

Mr. Larry Hird left for Edmonton last week end.

## NEW ASSISTED PASSAGE PLAN

BRIT. GOVERNMENT WILL LOAN NECESSARY MONEY TO SUITABLE MEN

OTTAWA—A new assisted passage scheme for providing Canadian farmers, with British workers was announced by the department of immigration. Young men in the British Isles who have not been able to find the present ten-pound steamship fare are to be recruited and after examination by Canadian immigration authorities will be loaned their passage money by the British government.

The movement will start within a month it is expected and several thousand men will probably be brought out this year.

A survey of the various provinces is at present being conducted by the department and the number of men to be assisted will depend upon the demand for agricultural workers.

Miss Dinwiddie who was teaching at the Sydenham school is now in charge at the school of the Aspen S.D.

## STRONG OBJECTION TRACKWAYS BILL

PRIVATE BILL FOR PAVED TOLL ROAD BROWNLEE SAYS DOOM-TO FAILURE

EDMONTON—Strong appeals in support of the Alberta Trackways Bill, which if passed will allow Calgary residents to proceed with a plan of building a paved toll highway from Calgary to the eastern boundary of the Rocky Mountain Park, were voiced by A. A. McGillivray, K.C., Conservative, Calgary, and A. B. Claypool, Government, Didsbury when second reading of the bill was moved by Mr. Claypool in the provincial house.

The premier said he was prepared to allow the bill to go before the committee so that it could be discussed freely and to give the promoters of the scheme an opportunity to present their case in line with the action taken last year, but he made it clear that he was strongly opposed to the measure. He said that the move for a hard surface road was premature; there was no need for it; he was opposed to the principle of toll roads. He also believed that the project was doomed to failure right at the outset.

The big Chev. chassis demonstration at the Masonic hall on Saturday evening met with something that every one should take in. Lectures and moving pictures are to be given and instructive as well as interesting gathering. It is to be repeated at Gorton's hall at Edmonton on Monday next, and a dance will follow that gathering. All are welcome.

A bean supper, concert and dance is to be held at the Auburndale hall on Wednesday night by the U.F.A. of that district.

## THE INCOME TAX BOSS

Hon. W. D. Brier, Minister of National Revenue

By an amendment to the Supplementary Tax Act made available on Saturday provision is made to strike a rate to produce two mills on the assessment of land, buildings and improvements in towns and cities fixed by a commission which will be set up. A similar levy will be made on the assessed value of parcels of rural land.

The section providing for this reads: "In every rural unit there shall be levied and collected annually a supplementary revenue tax at the rate of two mills on each dollar of the assessed value of every parcel of land as arrived at under provisions of the Alberta Assessment Commission Act."

But in an urban unit there shall be levied and collected annually a supplementary revenue tax at such rate upon assessed value of each parcel including buildings and improvements thereto as would render total taxes imposed on parcels in units equal to mills upon equalized assessment of the unit as fixed under provisions of the Assessment Commission Act."

## OIL ACTIVITY STILL CONTINUES

WORK IN WAINWRIGHT FIELD IS PUSHING AHEAD RAPIDLY... NORTH & WEST

At the Sasko-Wainwright well north of town the baling is still being continued for the purpose of keeping the product coming in nicely, and most assuredly this is the case for the crude is still keeping its level at around the 850-foot level in the casing with a finer and lighter quality of oil. Timbers are on the way for this well and at the earliest possible moment the big walking beam pump will be steadily lifting the oil to the tanks which are now being made on the site by Mr. Asher.

Regarding the new refinery by the Associated Refineries Ltd. to which this oil is all contracted, a start was made on Monday on the foundation for the first still, and it is fully expected that by April 1st the initial unit of stills will be taking oil and turning out gasoline and distillates.

As soon as the first unit has been completed it is projected to continue to expand the plant until the 1,000-barrel per day size of refinery is erected, and with the product from the B.P. 3B the Edmonton Wainwright, and the Sasko-Wainwright wells all being pumped to the refinery which will be within a stone's throw almost of these three producers, things should be humming merrily for the plant by mid-summer Wainwright.

At the No. 2 Wainwrights the tremendous gas encountered last week is still unabated, and in fact although big flares are burning to give relief to the casing head, the big valves have to be opened at times to keep things to a safe factor. Indeed the gas is so strong and so heavy that the flares have had to be moved further away from the well for safety from fire and the refinery fires have had to be extinguished for the same reason.

Fabyan Pete  
Mr. Roy E. Williams of the Fabyan Pete informs us that work is now all laid out for cleaning and deepening No. 2 and No. 4 wells of the old B.P. company which have now come under his jurisdiction as well as opening and cleaning the Fabyan No. 1 well origin ally known as the "Mystery well" which was drilled by the Imperial Co. some years ago.

These works, with the continuation of work at the Fabyan Pete No. 1 and 2 will surely keep this company busy this Spring and it is confidently expected that the products from these several wells will be available within a very short time as they are all known as producers with the exception of the latter.

It is the intention of this company to supply natural gas to the residents at Fabyan and we understand that it will be at a much cheaper rate than is usual at present for this commodity.

Hargal Oils  
News from the coast at the end of last week was to the effect that the controlling interest in the Hargal Oils Ltd. (which company last summer took over practically all the worthwhile acreage and machinery of the original B.P. company in both the Wainwright and Turner Valley fields) has now been sold to a Montreal company under the direction of Messrs Jantner, Court and Co. of that city.

Three thousand acres in the Turner Valley and the Wainwright area are involved and the consideration is placed at more than one million dollars.

Plans are being made for the drilling of four wells in the Turner Valley which was stated at a recent meeting. S. W. Miller head of Miller Court and Company confirmed the transaction and said an official announcement would be made later.

## NEW ACT TO RAISE TOWN TAXES

LEVY IN TOWNS AND CITIES ON LAND, BUILDINGS AND IMPROVEMENTS

By an amendment to the Supplementary Tax Act made available on Saturday provision is made to strike a rate to produce two mills on the assessment of land, buildings and improvements in towns and cities fixed by a commission which will be set up. A similar levy will be made on the assessed value of parcels of rural land.

The section providing for this reads: "In every rural unit there shall be levied and collected annually a supplementary revenue tax at the rate of two mills on each dollar of the assessed value of every parcel of land as arrived at under provisions of the Alberta Assessment Commission Act."

But in an urban unit there shall be levied and collected annually a supplementary revenue tax at such rate upon assessed value of each parcel including buildings and improvements thereto as would render total taxes imposed on parcels in units equal to mills upon equalized assessment of the unit as fixed under provisions of the Assessment Commission Act."

Mr. Roy E. Williams has quite a gang of men at work strengthening the derricks at Fabyan and busy on other operations to commence the season's oilfield work.

Geologist Slipp, of the Northwest Territories, was in town last week. He was particularly interested in the new Wainwright big gas producer.

It would be just as easy to sell lumpy whips in Detroit, as for an out-of-town firm to sell lumber in Wainwright, if prospective builders will get our prices and compare them with "direct to consumers" catalogues. In addition to this we throw in better service and better lumber for good measure. Atlas Lumber Co., Joe Welch

## HOUSEHOLDERS READ AND PROFIT THEREBY

It is the intention of the Town scavenger to have all the alleys cleaned up as soon as possible this season and in this connection he has extra help employed. In order to assist so far as possible, all householders are asked to see that their yards, etc., are cleared of the winter accumulations and the rubbish piled in the alley behind, when the wagons will remove it in the course of their rounds at the earliest possible time. **HELP! KEEP YOUR TOWN CLEAN!**

\*\*\* A grass widow is anything but green. She knows her onions; just as the people do who buy their house-cleaning supplies from the Atlas yard. Phone Joe Welch at 87.

Mr. Angus Fraser has purchased the farm of Mr. L. Samuelson of Battleview, who is planning to move to Cold Lake shortly.

## ALBERTA TEACHERS CONVENE APRIL 1ST

EASTER MEETING TO BE HELD AT McDOUGALL CHURCH IN EDMONTON

Alberta teachers will sit in convention at Edmonton for four days, commencing April 1 when the annual Easter meet of the Alberta Teachers' Alliance will open at the McDougall United church.

April 2 the session of the Alberta Educational association annual meeting will be held and from then on the business of the two meetings will be interspersed.

Most important amongst the matters coming up for discussion is the new School act a whole day being allotted on the agenda paper for its discussion.

Sir Charles Grant Robertson president of the University of Birmingham and E. H. Lock, representing the Canadian Teachers' Federation will deliver addresses at the convention.

## "SCOTLAND IN SONG & STORY"

INTERESTING LECTURE GIVEN AT ST. ANDREW'S CHURCH LAST WEEK

The illustrated lecture "Scotland in song and story" given by St. Andrew's church last Wednesday evening proved quite a success.

Many of the audience were from the land of the heather and seeing the beautiful slides was almost their paying a visit to the old homeland. The historical features of the lecture as delivered by Mr. R. Dunmore was very entertaining to those interested in Scottish lore.

Mr. Carrell handled the lantern in approved style, while Mrs. Carrell sang a couple of Scottish ballads appropriate to the occasion.

Mr. Patterson kindly loaned his gramophone and Mr. Snyder a number of records of Scottish music and these numbers being interspersed throughout the lecture were greatly appreciated.

Rev. W. Brooker acted as chairman and a pleasant evening was closed with "Auld Lang Syne."

If you have a constructive suggestion to offer on any problem affecting the town or district write a letter to the editor. Open discussion of this kind makes for the best solution in the long run. In writing remember that we should all belong to the construction gang rather than the wrecking crew.

Mr. Eugene Troy made a deal this week for the Colliclean farm near town and has now moved there. He has rented his town house to Mr. Reese who is employed at the C.N. repeater station.

Mr. H. Brunker was away to the city on business for a few days last week.

Miss Mabel Fraser paid a visit to her parents here from the city.

## REFERENCE BOARD

### CHAIRMAN REPORTS

JUDGE TAYLOR ADVISES THAT SYSTEM ELECTING TRUSTEES BE OVERHAULED

EDMONTON—Changes in the present system of hiring teachers for rural schools also that teachers could not resign or be dismissed at any time during a period of one year unless for what would be considered grave cause, was recommended unanimously by members of the provincial legislature after Judge Taylor of Edmonton, chairman of the board of reference of the department of education, presented his report at the meeting of the agriculture and colonization committee of the house Wednesday.

Judge Taylor during the course of the meeting also expressed himself as being in favor of a thorough "overhauling" of the system under which school trustees are elected, and held that school trustees should be elected at the same time as the municipal elections were held and that in the case of local improvement districts special provision should be made.

"It is time that some of the teachers were made to sit up and take notice," D. H. Galtbrith (Gov.) Wainwright stated and L. E. C. Gibbs Labor, Edmonton, who is a teacher at the Edmonton Technical school Edmonton, and J. W. Barnett, secretary of the Alberta Teachers' Alliance both expressed themselves as being in favor of disciplinary measures if necessary.

## STOCK OF GAME BIRDS TO BE INCREASED

Some 2,000 Chinese ring-necked pheasants, 600 Mongolian pheasants and 3,000 pheasant eggs for hatching will be brought into Alberta this year states C. A. Hayden, President of the Provincial Fish and Game Association. It is reported that the pheasants placed in several districts in the province last season have wintered very well and it is hoped that through the activities of the association and a number of local bodies, the supply of these desirable game birds will be greatly increased within the next few years.

## IRELAND'S PATRON SAINT HONORED

ST. PATRICK'S DANCE BY GOLF CLUB IS REAL BIG SUCCESS

In a theatre tastefully and suitably decorated with the emblems of "St. Pat." and to the strains of some of the old popular Irish melodies played by the Clark Orchestra, the Wainwright Golf club made merry on Monday evening in their annual dance.

A nice crowd was on hand to enjoy the festivities, and the floor was in excellent condition for dancing.

At midnight a delicious lunch was served by the ladies, and indeed the club and its indefatigable dance committee are to be sincerely congratulated upon the success of such a delightful affair.

## STATE MEDICINE PLAN IS COSTLY

PREMIER BROWNLEE GIVES OUT FINDING OF SPECIAL BOARD NAMED IN 1928

EDMONTON—A system of state medicine for the province of Alberta is feasible but would entail the expenditure of a considerable sum of money; improvement of health conditions in Alberta would be better served by a system of preventive methods rather than curative methods; the whole civilized world is investigating the system of state medicine and in some places considerable progress is being made.

The above represents the salient points outlined in the report of the special government committee appointed at the 1928 session of the provincial legislature to investigate a system of state medicine and made available for publication by Premier J. E. Brownlee.

No Move by Gov't  
Although no official statement has been made by the government on the question, it is stated authoritatively that the government does not intend to move further on this question this year at least although Labor members of the legislature intend to bring the matter again to the attention of the premier at a conference which will be held. At this conference the matter of eight hour day legislation and workmen's compensation will be discussed.

The report may be the subject of a debate in the house at a later date.

## SCHOOL SALARIES CONSIDERED LOW

URGE MORE PAY FOR INSPECTORS & GOVERNMENT TEACHERS

EDMONTON—Higher salaries for teachers and school inspectors employed by the provincial government were advocated by J. T. Shaw, Liberal, Bow Valley, during the consideration of the department of education estimates in committee of the whole.

Mr. Shaw also stated following an announcement made by Hon. Perren Baker minister of education, to the effect that two new resident inspectors were to be appointed this year for Calgary and Edmonton, that the need for more inspection is applicable more to the rural districts than to the cities. The close and systematic supervision being carried out by the officials of the school board in Calgary and presumably in Edmonton is such that the two new inspectors could well be used in the country district instead of the city, he declared.

Mr. Baker remarked that he had not received any representations from Calgary school board to the effect that the services of the provincial inspectors were not required. He believed that conditions in the rural districts were being handled satisfactorily.

The minister of education also spoke of the scarcity of teachers. There were vacancies for 40 teachers throughout the province at the present time and the department he said may be forced to advertise outside of the province for teachers.

## ALBERTA MUSKRATS SHIPPED TO ENGLAND

Ten pair of live muskrats were shipped from Edmonton during the past week to England. This shipment the first of its kind to be made from breeding stock, will form the nucleus of breeding stock for a large English fur raising concern. The shipment was made by A. C. McFadyen who states that if this trial proves successful several thousand more rats will be shipped through the next few months. Further evidence of the rapid growth of this industry is given by orders for breeding stock which Mr. McFadyen has recently received from Czechoslovakia.

## DOLORES COSTELLO IN "OLD SAN FRANCISCO"

MELODRAMA OF CHINATOWN & OF THE BARBARY COAST AT THE THEATRE

Kipling's "Take me somewhere East of Suez where the best is like the worst, where there ain't no Ten Commandments and a man can raise a third" might well have been sung of old San Francisco's Chinatown and Barbary Coast and it is these regions that Warner Bros. recreate for us in the thrilling and uncannily realistic "Old San Francisco" starring Dolores Costello and featuring Warner Oland. Alan Crookland who won such high acclaim for his direction of "Don Juan" has added to his reputation in (Continued on page four)

## FARMERS URGED TO SOW BETTER SEED

BULLETIN WILL BE WIDELY CIRCULATED AMONG ALBERTA AGRARIANS

G. M. Stewart district inspector of the Dominion seed branch is in Edmonton this week to arrange for the better seed campaign staged through out the province from March 10-16 in June.

The Dominion seed branch has issued an interesting bulletin giving in detail the result of the seed trial survey which has been conducted during the past three years. It was in view of the fact Mr. Stewart stated that about one-half of the seed examined under the survey would be rejected as unsuitable for seeding purposes according to the Seeds Act standards that it was decided to issue the bulletin. This will be widely circulated among the farmers of the province.

The bulletin also deals with what can be considered good seed and the basis on which this should be judged; also advice regarding the treating of seed for smut control as well as the cleaning of seed. It is mentioned in the bulletin that it was found by careful inquiry that 34 per cent of the farmers whose the samples were secured had not cleaned their seed before sowing; that 18 per cent of the growers stated they had not treated their grain to prevent smut before sowing; and that twenty per cent of the agrarians did not know what variety of grain they were sowing.

## THE CRIME CODE

It was not until that moment that amid the crowd of Roman nobility and the diplomatic circle I caught sight of the charming girl I sought.

She was dressed in a cloth of silver the skirt embellished with a broad band of diamonds and pearl embroidery which reflected the light from a

thousand angles—one of the most striking costumes at the court. I saw her accept a tall slim attache of the French Embassy as her partner. Her face slightly flushed was as beautiful as the angel of Lorraine upon the wall of Saint Andre. Afterwards I watched her elegant cavalier in his gold-branded uniform hand her over to a well-dressed and rather stiff looking lady of middle age and presently I noticed her chatting merrily with the Princess Palatinate, the Queen's lady in waiting. Later on as though quite accidentally I met her as bowed low over her hand.

She smiled at me and expressed satisfaction that we should meet again. Her attitude was much more cordial than on the previous night.

"Lady Kingscliffe told me that you are always travelling," she said in French as we stood against the wall together watching the dancers. "I love travelling but—And she raised her shoulders expressive of disappointment."

"You do not travel very much? I want to see London and New York—Athens"

"Well if you travelled as constantly as I do you would fear you very tired of the world," she said and then she turned to her gown.

"You have been in Rome before?" she asked.

"Yes Once before I out out usually with the tourists to see the tourists to see the monuments. It is such great fun—I assure you! But oh I do so want to see your London."

She spoke with an air of greatest refinement and her eyes as she looked at me seemed so childlike and innocent.

"Yet when one is not one's own mistress what can one do?" she added.

"Some young ladies become defiant of parents and chaperons," I laughed. "But I would not advise such a course. Will you honor me with a dance Contessa and let us forget all our troubles eh?"

She accepted my invitation and a few moments later we were waiting together while Lady Kingscliffe who I knew had been watching turned away with an amused smile.

Angela charmed me beautifully. As a dancer myself I had been to many balls and had had some splendid partners. But this brown-eyed girl of mine very easily did them all.

Later after an enjoyable hour during which I endeavored by all the means in my power to discover more concerning the mysterious girl I took her to supper where we sat down to a table-tete repast.

Around us were many people I recognized for very slowly my memory was returning. Rospiglio with his wife the Minister Sonnino, Caetani and his daughter Donna Stella and the ever popular Princess Odessa with her wonderful emeralds.

From the chatter of the Little Countess it was apparent that she moved in high circles and was acquainted with many officials.

Later I led her back to the ball-room.

"Monsieur Hipwell" whispered the Little Countess just as we were about to dance. "I wonder if you—well if I dare ask you to do a very great favor for me?"

"Most certainly I will" was my eager reply.

"Well I cannot tell you here could you meet me—tomorrow? I will be alone."

"Where?" I asked.

She reflected a moment.

"In the Church of Saint Angese in the Piazza Navona 'Would eleven o'clock suit you?"

"Certainly I will be there."

And thus it was arranged.

Punctually at the hour she had named I entered the great domed church with its huge columns of Cot tanello built upon the spot where Saint Agnes suffered martyrdom. The silent interior was quite dark after the glare of the sun from the piazza outside, but in a few moments I saw a slim figure in a neat navy blue street suit which I instantly recognized as the Contessina's standing before the antique statue of San Sebastian. A whispered timorous greeting and a

warm handshake whereupon she suggested in a low voice:

"Let us talk here if we go outside somebody who knows you may see us."

"Bela!" I replied. There are chairs yonder." And we crossed to several rush-bottomed chairs near one of the side alters before which the light was burning in its red glass shade. It was evident that she meant to preserve the strictest secrecy and this very fact increased my interest in her.

"Last night you told me that I could trust you Monsieur Hipwell" she said in a low voice though we were alone in the great church. "I am a mystery to you I know that."

"But we have met before. Have we not?" I asked fixing my eyes on her. She gave vent to a little hysterical laugh.

"You know. But perhaps you have forgotten. You forget many things."

"But I could never forget you. Contessa! I declared. 'Will you not enlighten my delirious mind?' You tell me that I forget many things."

"In life there are many things that are surely best forgotten she remarked with a slight sigh."

I paused not being able to follow her meaning.

She was aware that she puzzled me and next instant with a sweet smile she went on: "I told you Monsieur Hipwell that I trust you. Will you do me a little favor which—which will be of the greatest assistance to me—relieve me perhaps of a great peril which threatens to overwhelm me?"

"Peril!" I echoed staring at her. "In what peril are you? Please be more explicit. I know that we were friends in the past, just as we are friends now. Cannot you give me a single hint which may form a connecting link in my mind between the past and the present?"

"The past is of the past and matters not," replied the girl in a serious philosophical mood. "It is the present and the future which concern both of us—yourself more perhaps than you ever dream."

She saw perplexity on my face.

"I know that in your present half-consciousness of the past I must be a complete enigma today," she added. "For the present it must be so. Then for the future I shall have to tell you."

"Not a very difficult mission," she replied in French her manner instantly changing. Now you thoroughly understand each other eh? You are going to London. Would you take a verbal message for me—to someone—"And she paused. "Ah!" she went on. "I see you wonder why I do not write. But there are times when writing is an indiscretion. Well this is an instance True I could write but should most probably seriously jeopardize myself if I did so. I am in great difficulty—and that is why I venture to ask you to help me."

"I will assist you willingly," I repeated.

"Very well then when you get to London will you write and make an appointment to meet Mr. Roddy Owen who lives at Harrington Court Park Lane?"

"Just a moment I interrupted. 'I'll write down the address' And in the dim light I scribbled it upon my shirt cuff. I knew Harrington Court as a great block of new and expensive bachelor chambers. 'Yes; and when I see him what shall I say?"

"Give him this. It will be your credential and by it he will know you came from me." And she pressed some thing hard and flat into my hand.

I looked at it and saw that it was a piece of exquisitely carved stone about two inches long and with a gold ring on it—a pendant of clear blue

aquamarine. It was square perforated and carved in antique design with two circles the figures double-nought—an unique ornament of crystalline beauty.

"Give it to him," she whispered to me in a strange hard voice, and tell him—tell him that—Oh! it's all impossible!—that he must forget—That—"

And she hesitated trembling and drawing a long breath.

"That it is all impossible—and that he must forget—I repeated slowly."

"Yes impress upon him that he must not write again to me because it would place me in very grave danger."

I looked into her beautiful face much puzzled. In the faint light I saw that my companion's countenance was now pale and hard as though what she had said was against her will and that she was much perturbed.

Continued Next Week

## HE'S BEEN IN THE AIR NEARLY TWO YEARS STILL LIKES TO FLY

Eddie Stinson barnstormer, war pilot and airplane manufacturer, the other day finished his fourteen thousandth hour in the air, a record, it is claimed no one else anywhere in the world has ever approached.

Fourteen thousand hours represent 531 1/3 of twenty-four hours each or the equivalent of about nineteen and a half months in the air, if they were all strung together in one flight.

writes J. Earle Miller in Popular Mechanics Magazine.

"For a man still in his early thirties to have spent nearly two years in the air is a remarkable thing, but more remarkable still is the fact that after fifteen years of flying it still holds its lure—the one thing he wants to do."

The great majority of flyers after a few years' experience retire into some thing not quite so hazardous, but Eddie Stinson expects to keep on flying as long as he lives. The answer is one of those rare persons, a natural-born flyer.

That is not to be wondered at, for he comes from the greatest flying family in the United States and so far as American and British records show, the world. The flying Stinsons have produced four pilots—Katherine, Marjorie, Eddie and Jack—a record believed to be unique.

Stinson doesn't feel he has spent 34,000 hours in the air.

"I've never given it a thought," Eddie confessed the other day. "It's the one thing I want to do and the only thing I know how to do—build planes and fly them. I get in six or eight hours every Sunday, usually flying down to Chicago from the factory at North

ville, Mich., to spend the day with the boys at the airport and while we have a test pilot I usually manage to get in a bit of time on every plane we build."

What these bits of time amount to is indicated by the fact that in the two and a half years since he became an airplane manufacturer at the head of his own factory and began turning out commercial ships and special jobs for transatlantic and round-the-world flyers he has managed to keep up his average of around a thousand hours a year in the air. Last year with Capt. George Haldeman he took a Stinson "Detrolter"—a six passenger monoplane fitted with special gas tanks instead of of passenger seats—down to Jacksonville, Fla., and set up a new world's endurance record of 23 hours 36 minutes and 30 seconds the second time in a few years that he held the endurance mark. Both the Italians and the Germans have since bettered that record, but a new Stinson is coming out of the factory shortly to go after it again and Eddie will be at the controls half the time.

His chief recollection of the two and a fraction days of monotonous flying over the Florida coast last spring is that it allowed him to catch up in his lost sleep.

"We carried an elderdown quilt and a supply of magazines for entertainment," he explains. "The one old duty would stretch out read a bit and then go to sleep. I got almost twelve hours sleep out of each twenty-four. About the only discomfort was watching George's beard grow and wishing we could get it over with so he could shave."

Haldeman has no novice at long flights in a "Detrolter" for he piloted Ruth Elder almost to the Azores on her ocean flight.

The flying Stinsons' connection with aviation is almost as lengthy as that of the Wright brothers. Along about 1903 and 1904 when the Dayton bicycle men were making their first flights with power a boy in knee pants

down in Mississippi with the assistance of two aunts was building glider-type kites. The trio were Eddie, Katy and Marge who grew up to be respectively an airplane builder and a pair of famous women daredevils.

embarked. It was square perforated and carved in antique design with two circles the figures double-nought—an unique ornament of crystalline beauty.

"Give it to him," she whispered to me in a strange hard voice, and tell him—tell him that—Oh! it's all impossible!—that he must forget—That—"

And she hesitated trembling and drawing a long breath.

"That it is all impossible—and that he must forget—I repeated slowly."

"Yes impress upon him that he must not write again to me because it would place me in very grave danger."

I looked into her beautiful face much puzzled. In the faint light I saw that my companion's countenance was now pale and hard as though what she had said was against her will and that she was much perturbed.

Continued Next Week

Eddie Stinson barnstormer, war pilot and airplane manufacturer, the other day finished his fourteen thousandth hour in the air, a record, it is claimed no one else anywhere in the world has ever approached.

Fourteen thousand hours represent 531 1/3 of twenty-four hours each or the equivalent of about nineteen and a half months in the air, if they were all strung together in one flight.

writes J. Earle Miller in Popular Mechanics Magazine.

"For a man still in his early thirties to have spent nearly two years in the air is a remarkable thing, but more remarkable still is the fact that after fifteen years of flying it still holds its lure—the one thing he wants to do."

The great majority of flyers after a few years' experience retire into some thing not quite so hazardous, but Eddie Stinson expects to keep on flying as long as he lives. The answer is one of those rare persons, a natural-born flyer.

That is not to be wondered at, for he comes from the greatest flying family in the United States and so far as American and British records show, the world. The flying Stinsons have produced four pilots—Katherine, Marjorie, Eddie and Jack—a record believed to be unique.

Stinson doesn't feel he has spent 34,000 hours in the air.

"I've never given it a thought," Eddie confessed the other day. "It's the one thing I want to do and the only thing I know how to do—build planes and fly them. I get in six or eight hours every Sunday, usually flying down to Chicago from the factory at North

ville, Mich., to spend the day with the boys at the airport and while we have a test pilot I usually manage to get in a bit of time on every plane we build."

What these bits of time amount to is indicated by the fact that in the two and a half years since he became an airplane manufacturer at the head of his own factory and began turning out commercial ships and special jobs for transatlantic and round-the-world flyers he has managed to keep up his average of around a thousand hours a year in the air. Last year with Capt. George Haldeman he took a Stinson "Detrolter"—a six passenger monoplane fitted with special gas tanks instead of of passenger seats—down to Jacksonville, Fla., and set up a new world's endurance record of 23 hours 36 minutes and 30 seconds the second time in a few years that he held the endurance mark. Both the Italians and the Germans have since bettered that record, but a new Stinson is coming out of the factory shortly to go after it again and Eddie will be at the controls half the time.

His chief recollection of the two and a fraction days of monotonous flying over the Florida coast last spring is that it allowed him to catch up in his lost sleep.

"We carried an elderdown quilt and a supply of magazines for entertainment," he explains. "The one old duty would stretch out read a bit and then go to sleep. I got almost twelve hours sleep out of each twenty-four. About the only discomfort was watching George's beard grow and wishing we could get it over with so he could shave."

Haldeman has no novice at long flights in a "Detrolter" for he piloted Ruth Elder almost to the Azores on her ocean flight.

The flying Stinsons' connection with aviation is almost as lengthy as that of the Wright brothers. Along about 1903 and 1904 when the Dayton bicycle men were making their first flights with power a boy in knee pants

down in Mississippi with the assistance of two aunts was building glider-type kites. The trio were Eddie, Katy and Marge who grew up to be respectively an airplane builder and a pair of famous women daredevils.

## An INVITATION

SPECIAL PRESENTATION of The Outstanding Chevrolet of Chevrolet History

EVERYONE is familiar with Chevrolet's brilliant record of past success, but the new Chevrolet represents the most spectacular of all its achievements—introducing a new conception of motor car value.

It is with pleasure, therefore, that we announce our ability to secure the services of a Chevrolet factory expert to conduct for us a special presentation of the Outstanding Chevrolet of Chevrolet History.

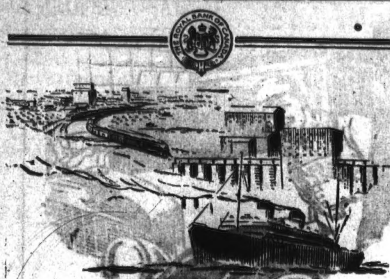

This presentation comprises a complete, thorough explanation of this sensational new car—and, in addition, a special series of illuminated slides and a motion picture of unusual interest entitled "Win Chevrolet Across Canada."

Everyone is interested in the latest automobile developments! Everyone is cordially invited to attend! Make a note of the time and place.

A SIX IN THE PRICE RANGE OF THE FOUR

On Saturday, March 23rd, at 8.15 p.m. in Masonic Hall, Forster & Co., Wainwright

On Monday, March 25th, at 8.15 p.m. in Gorton's Hall, Edgerton, Alberta. Dance after Demonstration

### From the Prairie to the Sea

**BACK** of every farmer—back of every harvest—back of every movement of Canada's wheat crop from the prairie to the sea, stands the Bank with its money and its service.

With the largest number of branches in city, town and village throughout Canada, this Bank plays a vital part in financing agriculture, trade and business.

99 — PHONE — 99

More transmitters for the across radio telephone service are to be constructed by the American Telephone and Telegraph Company and the British postoffice in order to meet the growing use of this service it has been announced.

The existing plant provides two speech channels and it is hoped that a third transmitter may be available for service about July 1929 with a fourth under consideration for a later date.

Meanwhile a possible improvement over the radiophone may be indicated by the announcement of the American

Telephone and Telegraph Company that it has perfected a sensitive submarine cable which will make it possible for the first time to secure effective telephone communication by cable between the United States and England. It is stated that the new cable promises more reliable service than that given by the best wireless methods known. The construction of such a cable for long distance purposes is under consideration it having been found that the cable, when not used for telephony would permit telegraph operation at higher speed than the latest high-speed telegraph cables.

**Railroad Radio Common in Hungary**  
In Hungary a railroad has its waiting rooms equipped with radio, and programs are broadcast by the company. Earphones are rented to waiting passengers for 30 cents an hour.

#### Latin Program

Toulouse, France the ancient capital of part of Gaul when Caesar's legions conquered the country, paid a compliment to its early invaders when its radio station broadcast a message in Latin. Thus one of the oldest tongues was conveyed by the newest scientific means. Latin scholars were invited to transmit their impressions in Latin.

There are a lot of modern programs on the air that would be improved if broadcast in a "dead" language.

#### Weather Makes Radio Unpopular in Guatemala

With the radio affording only slight competition the phonograph business is booming in Guatemala. Climatic conditions make radio reception difficult throughout the greater part of the year and few receivers are sold. Phonograph sales, however are large and portable models are especially popular.

**Byrd Radio Operator Talks to Home Station**  
Communicating weekly with the station in which he experimented while a student, L. V. Berker operator with the Byrd south pole expedition is working out radio problems with the University of Minnesota.

The long-distance conversations in connection with the expedition various wave lengths and the effect of conditions on transmission. By agreement they both go on the air Fridays.

The Byrd operator was a pioneer amateur station owner in his home state while a boy at Sleepy Eye Minn. During his senior year at the university he was chief operator of the experimental station.

#### "Radio" Trade-Mark Is Protected by U.S.

An attempt by a Brazilian citizen to secure exclusive trade-mark rights to the word "radio" has drawn official protest from the United States government officials in Brazil, at the instigation of the Radio Manufacturers Association. R.M.A. officials have been advised by federal authorities that the protests against the Brazilian monopoly of the word which is universally used probably would be successful.

J. S. Junqueira is said to have attempted to get exclusive use of the word. His success would virtually bar all radio exports of American manufacturers in Brazil.

(Copyright, 1928, by The Bonnet-Brown Corporation, Chicago)

#### RADIO QUESTIONS AND ANSWERS

Q—S. K. P. says: "I am trying to use a dial light on my set. This light is operated from the same transformer that supplies the filament current to my power tube. Whenever the dial light is working it causes a loud humming noise. What is the reason for this and how can I eliminate it?"

Ans—The hum is caused by induction from the wires carrying the AC to the dial light. Twisting these wires closely together and keeping them as far as possible from the other wiring should eliminate the trouble. If it does not, it may be necessary to run these wires through a grounded metal tube.

Q—J. N. B. says: "Can soldering paste be safely used as a flux for soldering radio connections?"

Ans—If the paste is such that it will not corrode the copper wire, it may be used safely. Even though it is slightly corrosive it may be used if used sparingly and on large conductors only.

Q—E. E. C. asks: "What should be the value of the center tapped resistor that is used across the UX226 tubes?"

Ans—This resistance may be anywhere from 5 to 20 ohms.

#### EDITORS PLAN VISIT TO PEACE RIVER

A trip through the Peace River country is planned by the editors of Alberta Weekly newspapers following

the annual convention of the Alberta Division of the Canadian Weekly Newspapers Association which will be held in Edmonton during the month of August.

#### ELECTRICALLY SPEAKING—HOW TO HANDLE WIFE

When a woman is sulky and will not speak—excite; if she gets too excited—control; if she talks too long—interrupt; if her way of thinking it not yours—convert; if she is willing to come half way—meet; if she will come all the way—revel; if she wants to go farther—conduct; if she wants to be an angel—transformer; if you think she is picking your pockets—detector; if she proves your fears are wrong—compensator; if she goes up in the air—condenser; if she wants chocolate—feeder; if she sings—harmonic—tuner; if she is in the country—telegrapher; if she is a poor cook—discharger; if she eats too much—reducer; if she is strong—rectifier; if she gossips too much—regulator; if she fumes and sputters—insulator; if she goes the wrong way—reverser.

#### Health Service

#### of the CANADIAN MEDICAL ASSOCIATION

#### WHAT TO DO IN AN EMERGENCY

The person who leads best with an emergency is the one who has thought out previously what to do, and who, when the emergency occurs, keeps calm, goes ahead and does things according to the plan.

When there is sudden illness or when an accident occurs, someone must take charge. Unless there is some person present who is more capable than yourself, this falls upon you. First of all, send one person to call a physician. Do not delay in doing this because the life of the individual who is ill or injured may depend upon prompt treatment by a physician. No matter how well trained you are to handle emergencies it is advisable to place responsibility upon a physician who is the one recognized to deal with sickness and accidents.

There is no doubt that many lives are saved each year by trained emergency workers. Thanks to the services they give, and the example they set, the untoward situations are met. It is the untrained person, who in his desire to do something does harm. The trained worker knows his own limitations and does not do harm because he knows what NOT to do as well as what to do.

In emergency cases, if you are not assisting, do not form one of the curious crowd who so often hinder those who are helping. If you are assisting the following suggestions may be helpful.

In general it is well to loosen any tight clothing the patient may have on. Do not be in a hurry to move the patient; any movement may cause damage to an injured part. Keep the patient lying down, with the head low. If a part is injured and clothing must be removed cut off the clothing in preference to moving the injured part. After an injury, there is usually a condition of what is called shock. Shock should be treated by keeping the patient warm. Blankets or overcoats are placed under, over and around the patient. If possible, hot water bottles should be placed under the arm-pits and around the body care being taken not to burn the patient. If the patient is conscious, give him a hot drink.

Questions concerning Health addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered by letter. Questions as to diagnosis and treatment will not be answered.

#### INTEREST SHOWN IN BETTER SEED CAMPAIGN

Farmers throughout the province and organizations interested in the improvement of agricultural conditions are taking a keen interest in the campaign directed by the Department of Agriculture to encourage the use of high quality seed grain for Alberta's 1929 crop. A number of radio addresses will be given from Edmonton, Red Deer, Calgary and Lethbridge during the coming week while 10,000 posters and 50,000 leaflets are being distributed to farmers in all sections of the province. A marked improvement was noted in the quality of seed sown in 1928 and it is expected that this improvement will be still further increased as a result of the attention which is being paid to this important factor in crop production at the present time.

#### MAN

Man comes into the world without his consent and leaves it against his will. During his stay on earth his time is spent in one continuous round of contraries and misunderstandings. In his infancy he's an angel; in his boyhood he's a devil; in his manhood he's everything from a lizard up; in

his dotage he's a fool; if he raises a family he's a chump; if he raises a cheque he's a thief; and the law raises the deuce with him; if he's a poor man he's a bad manager and has no sense; if he's rich he's dishonest but considered smart; if he's a politician he's a grafter and what is more a hypocrite; if he stays away he's a sinner, if he gives to the church he does it to show; if he doesn't he's stingy and a tightwad.

When he first comes into the world everybody wants to kiss him, before he goes out they all want to kick him. If he dies young there was a great

future before him; if he lives to a ripe old age, then of course he's living only to save funeral expenses. Life is a funny thing, isn't it? —Ex

Greater safety in driving economy in gasoline and convenience are some of the advantages claimed for an accelerator control throttle attached to the gear-shift lever. It permits shifting from one speed to another without moving the foot from the brake pedal, preventing killing the motor and provides the extra aim so often needed while driving in crowded traffic.

She wanted beauty . . . and she got it.

"Just like a woman," he said. "Carried away by appearances! Can't blame her, though. It is a wonderful looking car. It-m-m! Feels comfortable. Great body-builders, these Fisher people!"

"A real engine, too! It's a big six, all right. Feel that power! And that speed! And that getaway! And such brakes! What price did you say? Is that all? I'd have guessed at least two hundred dollars more."

## Wawanesa Mutual Insurance Company Hold Annual Mtg.

The 35th Annual Meeting of the members of the Wawanesa Mutual Insurance Company was held in the L.O.O.F. Hall, Wawanesa, at 2 p.m., February 14th, 1929.

Mr. Henderson in a brief speech called the meeting to order and stated that during the 35 years that the Company had operated and which covered one-third of a century, he had been one of the original Directors and had attended each one of the 35 annual meetings and hoped to be spared to attend several more.

The Managing Director, Dr. C. M. Vanstone, then gave the Directors' and Auditor's report.

The annual levy for 1928 was made at the rate of 20% of the net and resulted in assessments amounting to \$436,352.45 being received. Cash premiums amounting to \$150,482.34 were received. The policies written on the cash plan increased year by year and now amount to 25 1/2% of the total business of the Company.

Interest and rent brought in \$44,446.46, ordinary operating expenses amounted to \$201,103.48. Losses of a trade over \$200.00 were paid an increase of 50% over 1927. These losses occurred in two clearly defined periods, the first during the month of May and due to carelessly started fires in the time of the spring clean up, the second during harvest and due to poorly guarded stubble fires, particularly following the use of the combine.

The cash assets were materially increased and the total assets brought up to \$2,677,792.45 an increase for the year of almost \$200,000.

The year was remarkable in the Company's history in that a gain of almost 18 millions in volume was recorded for the year. The total insurance in force is now over 155 millions.

It took ten years of earnest effort on the part of the management to bring the Company up to a volume of 17 millions and we have every reason to feel gratified that we were able to put this amount of increase on in one year.

The retiring Directors were Messrs. Wallace and Reid who were re-elected. A vote of thanks was given to the Manager and Directors for the very able manner in which the business had been conducted.

A large number of Auction sales are being announced by Bill Stuart for this month among which are the following:

Dempsey Sale, S.E. 30-42-4, March 20th

Elliott Sale, S.E. 36-46-9, March 22nd.

## CONTINUATION OF Dolores Costello In

continued from page 1

"Old San Francisco" which shows here Thursday Friday and Saturday

The story is that of a half-caste boss of the underworld, who coveting the lands and the fair granddaughter of a Spanish grandee hounds the old man to his death. The girl on the ancient sword of her family pledges vengeance and having discovered the fact that the boss is a yellow man hawks the news about the underworld aided and abetted by a young man who with herself is kidnapped and secreted in a Chinese den. The boss tries to make the girl retract her statement by threatening to torture her lover. A crowd of Chinamen who hate their "white boss" force their way into the place and capture him while the girl is spirited away to a secret chamber by a Chinese girl.

The boss escaping from his captors recaptures the girl and drags her to a deeper cell where she is dressed in gorgeous array and offered for sale to wealthy Chinamen.

Dolores Costello is exquisitely beautiful as she always is and interprets the great emotional role.

## Makes Life Sweeter

Children's stomachs sour, and need as  
anti-acid. Keep their systems sweet with  
Phillips Milk of Magnesia!  
When tongue or breath tells of acid  
condition—correct it with a spoonful of  
Phillips. Most men and women have  
been comforted by this universal sweet-  
ener—more mothers should invoke its  
aid for their children. It is a pleasant  
thing to take, yet neutralizes more acid  
than the harsher things too often em-  
ployed for the purpose. No household  
should be without it.  
Phillips is the genuine, prescriptional  
product physicians endorse for general  
use; the name is important. "Milk of  
Magnesia" has been the U. S. registered  
trade mark of the Charles H. Phillips  
Chemical Co. and its predecessor Charles  
H. Phillips since 1875.

failure.

## —LONGFELLOW

## ALBERTA HOUSE

## IS OVER-MANNED

A special committee of the Legis-  
lature is looking into the question  
of redistribution. In making the an-  
nouncement Premier Brownlee sug-  
gested that the addition of three mem-  
bers was under contemplation.

Instead of increasing the number  
of members some attention might be  
paid to possibilities in the opposite  
direction. From the standpoint of po-  
pulation the Alberta Legislature is  
overmanned in comparison with other  
Canadian legislatures says the Cal-  
gary Herald. Ontario with a popula-  
tion of nearly 3,250,000 has 112 pro-  
vincial members which works out on  
a basis of one member for every 29,  
000 persons. Quebec has 85 members  
representing on a general average 34,  
110 persons.

Considering west one finds Manitoba  
and British Columbia with popula-  
tions about the same as that of Al-  
berta managing to administer their  
affairs with a per capita representa-  
tion of 11,900 and 12,500 respectively.  
The coast problem with a hinterland  
quite as vast and difficult to visit as  
that of Alberta has as yet 48 members  
Saskatchewan with a population of  
851,000 has 63 members or 13,500 per  
sons per member. Alberta has a mem-  
ber for every 10,500 the lowest in the  
list.

The administrative problems con-  
fronting the Alberta House are no  
more intricate than those which face  
the legislatures in the sister provinces.  
Apart altogether from the inequali-  
ties which exist in the present distri-  
bution of constituencies from the  
standpoint of population, it would  
seem feasible to reduce the house  
membership by at least one-third.  
This would not only effect an impor-  
tant economy in the form of indemni-  
ties but would inevitably promote great  
efficiency in the despatch of public  
business.

Transportation conditions have been  
revolving since the present con-  
stituencies were arranged. The tele-  
phone automobile and more and bet-  
ter roads are agencies which enable  
members to represent much larger  
constituencies than would have been  
possible when the province was creat-

## EIGHT-HOUR DAY

## BILL ABANDONED

The decision of the provincial gov-  
ernment to abandon the plan of intro-  
ducing eight hour day legislation this  
year to be commended. The Premier  
admits the government has been in-  
fluenced by the arguments presented  
against the proposed bill. The minis-  
ters have come to realize that it would  
be a foolish blunder for Alberta to  
take such a step when the rivalry  
among the three prairie provinces for  
new industries is so keen. Mr. Brown-  
lee acknowledges that it is in the  
best interests of this province the bill  
be not pressed at present says an ex-  
change.

The whole matter suggests that in  
future, when legislation of a radical  
nature is under contemplation the  
government should call into confer-  
ence the different interests affected.  
This might avoid a lot of unnecessary  
friction and bad feeling. Much might  
be accomplished by round table con-  
ferences with the government indus-  
try and labor participating.

While the eight hour day bill was  
introduced at the behest of the more  
aggressive section of labor, it should  
be obvious to everyone that a young  
and developing province like Alberta  
can only proceed at a certain rate  
in radical industrial legislation. If it  
moves faster than its sister prairie  
provinces and the eastern provinces,  
it will be ostracized by capital and  
industry. The province is already suf-  
fering in the east and in the old coun-  
try from a reputation that its govern-  
ment is prone to proceed farther and  
faster with experimental provincial  
administrations.

When the question of a general  
eight hour day comes up again the  
two interests most vitally concerned  
should be called into conference by  
the government. In the meantime the  
factory act and the minimum wage

## FORD

## The New Ford Car

What do you look for when buying a new car? Appearance: speed  
power, riding comfort, safety! We have them all.

## HERE ARE THE FACTS

## READ THEM

Every year it is estimated that a  
million car buyers change their ideas  
of their car after they have had it  
six months. Consider the following  
facts before purchasing your next car  
and then decide for yourself which  
car offers the most value for the  
money, as many people buy without  
investigation of facts and on snap or  
emotional judgement.

1. Do you know that no car under  
\$2,000 outside of FORD, is putting on  
Houdaille double acting hydraulic  
shock absorbers as standard equip-  
ment?
2. That no car under \$1,500 except  
FORD has triplex shatterless wind-  
shield glass as standard equipment.
3. Do you know that FORD is the  
only car at or near its price equipped  
with three-quarter floating axle?
4. Do you know that FORD is the  
only car under \$1,500 with torque  
tube and radius drive construction.
5. That FORD is the only car un-  
der \$1,500 with five anti-friction bear-  
ing transmission.
6. That the new FORD has 25 Roller  
and Ball bearing assemblies in its  
chassis?
7. That the new FORD is the only  
car at or near its price with three-  
quarter irreversible steering system?
8. That the new FORD and Lincoln  
are equipped with the same type one  
piece steel wheels as standard equip-  
ment?
9. That the new FORD is the only  
car in its class with silent, six brake,  
internal, expanding, all enclosed sys-  
tem?
10. That the wrist pins in the new  
FORD motor are machined to .002  
and are one inch in diameter, machin-  
ed to a glass finish, and are of full  
floating type?
11. That the aluminum alloy pis-  
tons of the new FORD are balanced  
to an accuracy of two grams. This is  
the finest balance of any piston in any  
car at or near its price.

12. That when the new FORD is  
travelling fifty miles an hour, the re-  
volutions per minute of the motor are  
only 2053?
13. Do you know that the piston dis-  
placement of the new FORD is 200.5  
cubic inches?
14. Do you know that the new  
FORD has larger tires than other  
cars in its price class?
15. That the gear ratio of the new  
FORD is 3.7?
16. That the actual road clearance  
of the new FORD is 9 1/2 inches; high-  
est of any American stock car?
17. That the new FORD has proven  
itself in public hands this past year  
as one of the finest performing cars  
ever built, from the standpoint of  
pickup, hill climbing ability, speed  
and riding comfort?
18. That the new FORD car has  
proven itself as a most wonderful  
winter car; it starts easily in cold  
weather and bucks snow beyond be-  
lief. Ask the owners?
19. That the service and Dealers  
responsibility behind the new FORD  
is unequaled by that of any other or-  
ganization?
20. That the new FORD holds the  
road at high speed as good as cars  
being sold at much higher prices?
21. That in actual competition in  
England against all comers the new  
FORD took first and second places?
22. That the new FORD won first  
and second place against all comers in  
Germany?
23. That the new FORD motor  
when travelling on the road at twenty  
five miles per hour, turns over at  
only 1038 r.p.m.?
24. That there are 890 electric weld-  
ing operations on the new FORD?
25. That 90% of all steel parts are  
steel forgings?
26. That the upholstery material  
of the new FORD is eighty per cent  
wool?

27. That the new FORD develops  
40 H.P. at 2200 r.p.m. Compare this  
with other motors. Slow speed means  
long life and low upkeep.
28. The body and chassis are in-  
tegrated with anti-friction tape, and the  
motor is in rubber.
29. That Alameda Zerk lubrication  
is standard equipment on all models?
30. That the crank shaft and fly-  
wheel of the new FORD are bal-  
anced statically and dynamically?
31. That it is possible to have a  
choice of body colors in all models?
32. That the new FORD is not the  
lightest car today, as there are many  
lighter cars and several within one  
hundred to three hundred pounds of  
its weight selling at hundreds of dol-  
lars more money. This in spite of the  
fact that the new FORD has no metal  
castings except the motor and fly  
wheel housings?
33. That the new FORD, as at this  
date is a very smooth, efficient, com-  
fortable and economical means of  
transportation with a gasoline con-  
sumption of from 25 to 30 miles to the  
gallon, and has a very economical,  
three-way oiling system, viz, pump,  
splash and gravity.
34. That the combined Thermo-  
Synphon and pump system of the new  
FORD is one of the most efficient cool-  
ing systems yet invented?
35. All models are now Houdaille  
equipped and have the new starting  
bendix and rumble eliminator.
36. That the new FORD stands out  
supreme in its field in mechanical  
design, specifications, equipment, qual-  
ity and precision of workmanship?
37. That these things are only  
possible through the unusual struc-  
ture of the Ford Motor Company,  
with its enormous buying capacity  
and its unusual manufacturing facili-  
ties?
38. That there are now over one  
million of the new Model A cars now  
in use?
39. That the Ford Motor Company  
built the Model A car up to a stan-  
dard to maintain a reputation?

## A word from the publisher . . . . . about advertising

THE PRODUCTS YOU SEE CONSISTENTLY ADVERTISED IN THIS PAPER ARE WORTHY OF YOUR CONFIDENCE.

IT TAKES TWO THINGS TO MAKE A CONSISTENT ADVERTISER. ONE IS A STRONG CONVICTION THAT HE HAS A PRODUCT THAT WILL HOLD ITS PLACE IN PUBLIC FAVOR DESPITE COMPETITION THE OTHER IS ACTUAL PROOF OF THAT . . . THE INCREASING POPULARITY OF HIS PRODUCT.

IF HIS PRODUCT WILL NOT STAND THE TEST OF COMPARISON HE WOULD SIMPLY BE THROWING HIS ADVERTISING INVESTMENT AWAY, IF THE BUYING PUBLIC REJECTS HIS PRODUCT AFTER IT HAS BEEN OFFERED IN ADVERTISING HE HAS THROWN HIS ADVERTISING INVESTMENT AWAY.

THAT'S WHY THE MANUFACTURER WHO ADVERTISES HIS MERCHANDISE CONSISTENTLY IS VERY SURE OF HIS QUALITY . . . AND WHY YOU MAY BE SURE OF IT, TOO.

READ THE ADVERTISING HERE IN YOUR NEWSPAPER . . . WILL GUIDE YOU TO THE BUYING OF WORTHY MERCHANDISE

## The Road To Better Health

By Dr. ARTHUR L. FORSTER

Under the direction of the Division of Medical Sciences of the National Research Council, a committee composed of eminent authorities recently published the results of a survey of the physical causes of deafness in the United States. Their report gives the findings elicited by an examination of 5,734 patients in nine different institutions.

The Leading Causes of Deafness

Judging from the report, sex has little bearing on the occurrence of deafness either congenital or acquired. So far as age is concerned, the most dangerous period for the development of deafness in children appears to be the first three years of life.

Congenital deafness is not diagnosed as a rule until the child is about two years old. Parents are unwilling to admit that the child is born deaf and it is only when he is around the age of two that they usually become convinced that he does not hear and then need medical aid.

The report goes into lengthy detail regarding the relationship of infections to deafness. When an infection reaches the hearing of hearing the results are usually serious. However infected tonsils and adenoids while producing mild deafness in children cannot be charged with causing complete deafness inasmuch as the infection of the inner ear rarely occurs on both sides.

The study made by this committee included an investigation on the bearing of hereditary and familial factors on deafness and covered 723 cases. It disclosed the fact that with the exception of congenital deafness, the morbid change responsible for deafness is a developmental defect in the inner ear.

Many Cases of Deafness Preventable

It goes without saying that there is no hope for the child born deaf. But much can be done for children suffering from disorders of which deafness is a frequent sequel. For example, scarlet fever which is responsible for many cases of deafness due to infection in the middle ear.

Whenever a child complains of earache he should be examined immediately by a specialist. I say specialist advisedly as what the average general practitioner does not know about the ear would fill a book. And he is even more helpless when it comes to employing appropriate treatment.

Many people apply heat when a baby complains of earache not realizing that an imprisoned infection is made worse. This practice is responsible for many of the cases of mastoid trouble that develop.

Another common mistake is to let an ear infection run along until the drum ruptures. Nature does induce drainage in this way but at the expense of considerable destruction of the drum which is often irreparable. The proper procedure is to have a specialist make a small opening in the drum to allow for the escape of pus. He makes the incision at a point where the subsequent lesion will have the least effect on the functional capacity of the tympanum. Moreover, he does it before the drum has undergone destructive changes as a result of the prolonged action of the infection.

Wax in the ears is a common cause of deafness. Its accumulation is generally due to a tortuous narrow canal which prevents the evaporation and outflow of wax. Here likewise a specialist should be consulted as he will not do what the inexperienced layman is apt to do—drive infectious matter in to the deep structures by forcible irrigation with a syringe.

Many cases of deafness result from driving infectious material into the inner ear by blocking the nose when sneezing by blowing through both nostrils at the same time, or by forcing air into the eustachian tubes. Such habits are extremely dangerous and have caused many disastrous infections of the ear that inevitably lead to defective hearing if not deafness (Copyright, 1928, by The Bonner-Brown Corporation, Chicago)

## In Five MILLION HOMES TONIGHT

There are times when all a mother's love can't soothe a fretful baby. No way of telling just what's wrong, yet something must be done. Castoria's time! A few drops, and baby has dropped off to sleep. Yet this marvelous means of quieting a restless infant is utterly harmless. There is not one ingredient but what all doctors know and approve, and would let you give your baby every day in the week. In fact Castoria is a purely vegetable product. Gas pains, constipation, even diarrhea can be dissolved in this same manner. Castoria is older than you are, but physicians still say "nothing better for babies." An old-fashioned remedy if you count the years, but parents are old-fashioned who still raise babies without it. And at least five million modern mothers keep it handy day and night, for twenty-five million bottles were bought last year! Buy yours now! Don't wait until you need it.

## ASK ONTARIO FRIENDS TO USE ALBERTA COAL

One of our members adopted for furnishing publicity to assist in the development of the Alberta coal mining industry has been outlined in a letter received by the editor from Mr. John Blum, secretary of the Edmonton Chamber of Commerce.

We think you will agree that it is to the interests of everybody in the province that the coal industry of Alberta be developed so that steady employment will be provided for the miners, which in its turn will create business for everybody.

Mr. Blum is asking that you write your Ontario friends a letter similar to the one printed below or copies of it printed in typewriter type may be obtained free on request from the Edmonton Chamber of Commerce.

You may not be interested personally in the coal business but you are interested in the general prosperity of your province and a thriving effort on your part may result in adding to that prosperity.

Dear . . . . .

We want you to know something about Alberta Domestic Coal, which has kept your homes warm and comfortable under the most severe weather conditions therefore it should be even more efficient in Ontario. Our furnaces and chimneys are the same as yours.

I do not need to tell you that most of the money you spend for Ontario coal goes to Ontario for your manufactured goods, so that when you buy Alberta Domestic Coal you are not only buying a clean and efficient fuel, but you are helping two provinces as well as yourself.

## QUESTIONS & ANSWERS

The Benefits of Yeast

A. C. E. writes:

1. In a cake of yeast a day beneficial to anyone?
2. Will it improve the general nutrition and increase weight?
3. What action does it have in the body?
4. Will it help to rid the face of pimples?

Reply

1. Yes
2. In suitable cases yeast markedly improves nutrition and adds to body weight
3. The principal good of yeast is that it affords vitamins. It is also high in nutritive elements. It acts as a laxative in many people. It appears to be the best cure and preventive of pellagra.
4. By pimples I presume you mean acne. If so I may say that yeast does favorably influence this condition.

## C.N.R. SEEKS AID IN PLACING BRITISHERS

A special appeal for the co-operation of farmers in the province of Ontario in placing British families in farm employment, is being made by the colonization department of the Canadian National railways through the agricultural press of that province. One of the difficulties encountered in

placing experienced Britishers in farm work has been the securing of accommodations for their families on farms in this country. In order that all possible opportunities for placement of such Britishers and their families may be developed the Canadian National Railways is seeking in Ontario as to all Ontario farmers in a position to employ and accommodate immigrants of this highly desirable class.

## THE FARM HOME SHELTER BELT

Winter is the season when plans should be made for planting a shelter belt about your farm home for all that time the benefits of shelter appear to us most strongly. When the warm days of spring and summer come and work of planting trees for shelter should be done we forget the howling snowstorms, the days when the wind blows from the north-west and the thermometer dropped below zero. We forget too the days when we dashed through the drifts to get to the stables, and during those days the stocks received insufficient water as they could not be induced to stay at the water troughs long enough to drink. In winter the many difficulties due to lack of shelter appear very real to us. We know that it is the high cold winds that make our winter climate so disagreeable and that this can be overcome about our homes at least by shelter belts. We know also that good shelter would save much fuel would materially add to our own comfort and to the comfort and welfare of our live stock and the planting of a good shelter belt is a paying proposition. But in spring and summer we forget. Therefore let us plan now to start planting a wind break this coming season.

While a single row of trees will give considerable shelter, the ideal shelter belt, judging from experience at the Dominion Experimental Station at Charlottetown P.E.I. should be at least one hundred feet wide, should be situated about one hundred yards from the buildings and should protect them on the west, north and east. In making the first planting, it is advisable to use native spruce set in two rows about eight feet apart, placing the trees six feet in the row and arranging them so that each tree in the second row is in line with the space between two trees in the front row. Small trees about six inches or one foot in height are most easily transplanted and should be dug up with a square of sod attached. If two furrows are opened with the plough where the trees are to be set, the trees may be placed in the furrows and planted with little trouble. Spruce stand transplanted best in August, September or October, but the work may be done in early spring or late fall. After the first planting has been made its width may be increased from year to year by additional plantings. A few native hardwood trees set with later plantings of spruce add much to the appearance of the shelter belt and from a good background for the building. All plantings should be protected from live stock.

The present head of the household may feel that no benefit will be derived from a young shelter belt in his day but trees grow rapidly and so on afford considerable shelter. He should remember too, the fruits of his efforts may pass on to his descendants.

To prevent pumping water into the automobile gasoline tanks from filling stations a special valve has been devised to fit on the end of the suction line inside the station tank. Its essential feature is a float which sinks in gasoline but rises on water and when the pump before water at the bottom of the tank can be drawn into the customer's auto.

Please phone your coal dealer. Tell him you want a load of Alberta coal. If you turn it according to directions you will tell me it is the finest coal you have ever used.

Please let me hear from you soon.

Your very sincerely,

### BROWNLEE SAYS NO PEACE RIVER LAND PROJECT PROPOSED

EDMONTON — The provincial government has not been notified in any manner or form of the proposal to colonize 70,000 acres in the Peace River country, and no representations have been made either from the government or to the government in this connection, Premier J. E. Brownlee states.

The statement was made following publication of a report from London to the effect that a huge colonization undertaking would be effected in the Peace River area.

Continuing, the premier said that when individuals came before the executive council, with colonization schemes the answer invariably given was that when any details of such a scheme were completed, the government would be pleased to consider them. But the government always made it plain that it would not assist itself with any proposal which was not founded on a substantial basis.

### NEW SETTLERS OPEN UP NEW BIG AREA

Indicative of the tremendous development which has taken place in Western Canada, and the large part

being played by incoming settlers in that development, the land settlement officials of the Canadian National Railways in the West estimate that the total amount of new land broken and prepared for crop during 1928, in the territory tributary to the National lines was 750,000 acres, compared with about 500,000 acres in 1927. In addition to this some 300,000 acres was cleared of brush and prepared for breaking during the coming season. The significant feature of this increased farm development is that most of the new land was broken by incoming settlers, recruited and directed to locations by the Colonization Department of the Railway company.

### ALTA. MISSIONARY ELECTED HEAD COLUMBIAN COLLEGE

Rev C. G. MacKenzie of Grande Prairie, Alberta has been chosen principal of Columbian College, New Westminster in succession to Rev A. M. Sanford D.D., who has accepted a position in Union Theological College Vancouver.

Rev Mr MacKenzie is a native of Prince Edward Island and was educated at Prince of Wales College, Charlottetown at Dalhousie University where he took his B.A., in 1915. He served overseas.

In 1924 Mr MacKenzie came west to be pastor of United Church at Moosemin and in 1927 volunteered for pioneer work in the Peace River. He was sent to Grande Prairie.

### DAIRY POOL TO HAVE NEW HOME

A building permit has recently been issued to the Alberta Dairy Pool Limited for the construction of a \$20,000 brick building at 10531-102nd Street, Edmonton. The building will be of sufficient size to handle satisfactorily the ever growing central office activities of the Dairy Pool.

### HE LOVES ME— HE LOVES ME NOT

As lovers may  
The glad spring day  
A lad and lassie squandered:  
She said she knew  
Where daisies grew,  
And found one as they wandered.  
"Now I shall see  
If you love me!"  
With speech and action hazy  
And rigmorle  
So quaint and droll  
She pulled leaves off the daisy.  
In hurt surprise  
He raised her eyes—  
It said he didn't love her!  
"Do you suppose  
The daisy knows?"  
She begged the eyes above her.  
"What day is this?"  
He asked the miss,  
Her question overruling—  
The clouds dispersed  
"Why April first!"  
The daisy's only fooling."

### DIPHTHERIA IS PREVENTABLE

On two occasions recently spectacular flight in an aeroplane, have been made, to carry previous Anti-Toxin to Diphtheria patients. On the first one two brave men risked their lives and all that death to them would mean to their families, to carry their life-giving cargo to the farm North. On the second, a nurse and Anti-Toxin were taken to a stricken family only some sixty miles from Edmonton. The story of this far north is well known now, and needs no recapitulation. The story of the farm home near Westlock is rare tragedy. A winter storm, drifted roads, a whole family

stricken with Diphtheria. The mother and one child dead, and only a chance visit from a neighbour reveals the terrible story. The telephone, a doctor and an aeroplane, a nurse Anti-Toxin and the other members of the family are saved—Yet diphtheria is preventable.

Every home can be freed from the menace of this dread disease. Immunize every child. It is a simple thing to have done. Any Physician can do it. It entails no hardships nor pain. Surely it is a small price to pay for immunity from such a tragedy as struck that once happy home. Let this province lead the way in making the art of living a little safer for our children insulate against Diphtheria.

For literature on the above, subject write to The Canadian Red Cross Society, 407, Civic Block Edmonton.

### MEN DEFYING DEATH TO HARDEN WAR GAS FOR PEACE TIME USE

Men who eat corn mixed with liquid titanium tetrachloride, a chemical used to make military smoke screens; who subject themselves to the deadly carbon monoxide of automobile exhausts; who handle chemicals, a single drop of which eats flesh to the bone are experimenting at Edgewood Arsenal Md., in the production of new war gases and chemicals and in the utilization of these elements in industry, writes C. Moran in Popular Mechanics Magazine.

Recent research at this laboratory has shown that the useful life of rubber may be prolonged by treating it with certain anti-oxidants; that the minute natural "one-man tanks" of the sea—the marine borers—which have sent to the bottom more wooden ships than all the guns of war can be halted by Lewisite a deadly warfare chemical.

A toxic paint has been developed to prevent the formation of barnacles on the hulls of ships which cause an annual loss of \$75,000,000 in fuel alone. Barnacle is the term commonly used for all marine organisms which attach themselves to the bottoms of ships but the barnacle itself is but one of the number of such organisms although the principal one. These grow the accumulate rapidly on the hulls sometimes projecting many inches. Only a fraction of an inch is necessary however to impede materially the ship's progress. Increased fuel consumption of a vessel sometimes amounts to twenty-five per cent.

Every vessel must be drydocked periodically for barnacle cleaning the frequency of such cleaning depending upon the service of the vessel as to seasons and latitudes. The marine growth is active during the entire year in the tropics and only during the summer in the temperate zones. The paint devised by the war chemists is being used on destroyers in final tests to determine the relative life and cost of hot plastic paints and cold varnish paints.

The arsenicous acid seems to be quite prevalent as these chemists that all chemical agents of warfare are toxic. In a recent demonstration a smoke curtain was dropped from an airplane which was passing over a cornfield. Some of the liquid titanium tetrachloride fell on the leaves and next of corn which subsequently became discolored. The farmer claimed that his crop had been damaged and demanded reparation.

A number of the more discolored ears were sent to the arsenal for test and it was disclosed that neither liquid titanium tetrachloride itself nor the products formed when it produces smoke—hydrochloric acid and titanium oxide—are harmful to eat. The discolored ears were eaten without producing any bad effect and the same was true with grains of corn mixed with a small quantity of titanium tetrachloride. All the discolored corn was purchased and fed without injurious results to the livestock at the army post adjoining the cornfield.

The persistence of certain species of birds which are harmful to agriculture or which deface buildings has long been the subject of investigation by the biological survey Recent experiments have been made in endeavoring to exterminate these species by the use of chemical gases but curiously enough the birds emerged from the gases unhurt. It was found that birds have rather marked resistance to toxic gases and furthermore that it is difficult to build up out of doors sufficient high concentrations of these gases to be effective over extended areas.

During the war it was noted that pigeons almost always returned to their cages safely when liberated in a gas cloud. This was quite a mystery until it was realized that the pigeons escaped by rising quickly above the gas. The tests showed that crows attempt to fly out of the gas cloud in the same way as soon as its irritating effects are felt.

Methods of extending the life of rubber many times its normal life have been developed as a result of experimentation to prevent the rapid deterioration of the hose tube faceplate and exhalation valve of gas masks. Such deterioration made difficult the problem of maintaining a war reserve of gas masks. Initial tests revealed that methods of curing rubber had an important effect upon its life.

Undercured stock lacking sufficient sulphur becomes soft even sticky with age, while overcured and bloom stock, containing an excess of sulphur becomes brittle and cracks. As a result of the tests faulty cure has been corrected and facepieces are now molded individually. This has developed an increase of the useful life under normal storage conditions from a few years to approximately thirty-five years.

Another improvement in rubber has been developed with anti-oxidants. These chemicals when incorporated in rubber compounds materially reduce or retard rubber deterioration due to oxidation. Tests indicate improvement that may prolong the useful life of rubber to sixty years. For protection against sunlight a compound has been developed of rubber pigment, dyes and softeners dissolved or dispersed in a suitable solvent. Methods of storing gas masks in inert atmosphere such as nitrogen also have been devised.

The marine borers have been halted by Lewisite in the hands of the government chemists. Indications are that battles, started long before the sinking of the Spanish Armada now have been brought to an end by the application of a derivative of Lewisite in the path of the disastrous marine borers such as the teredo banks, murex and limoria.

These mollusks and crustaceans have been recorded in history as being responsible for sinking of many ships of the Spanish Armada and of boats to weakness the timbers of the dykes of Holland and they have caused millions of dollars of damage to the wharves of the world by eating the wooden pilings.

Following a recent explosion in an Alberta coal mine, eight men were trapped in the 5th rising heading their only means of escape blocked by after damp the gaseous products of the explosion containing the deadly carbon monoxide. Two of the men who tried to make their way through were overcome by the gas and died. The others waited for help and when equipped with self-rescuers the chemical filling of which is a product of chemical warfare research made their way through the firetrap unharmed.

### POTATO SEED TREATMENT QUESTIONS ANSWERED

(Experimental Farms Note)  
In preparing for spring activities in connection with treatment of seed potatoes it is well to review some of the questions which are unanswered in the rush of affairs last year, leaving doubt and confusion as to the method used and its effectiveness. Authorities agree that seed treatment is beneficial and while this operation is occasionally overlooked the satisfactory experience of a few in so doing must not be accepted as a guide to the majority. It is advisable therefore to treat your seed potatoes.

**BURNETT'S** is just that much BETTER

SIR ROBERT  
**BURNETT'S**  
OLD TOM LONDON DRY  
GIN GIN

when used at the rate of 1 pint of commercial formula to 12½ gallons of water. The tubers are dipped in this solution for two minutes when the temperature is held at 118-124 degrees F. This is a convenient method where large quantities of potatoes are to be treated. An accurate dairy thermometer is essential. If it often convenient to haul the potatoes to a nearby creamery where steam is available to keep the temperature even.

Organic mercury compounds have been recommended as seed potato disinfectants. They are being improved each year and it is expected that their use will render seed treatment less troublesome.

The corrosive sublimate method consists in soaking the seed potatoes 1½ hours in a solution composed of 4 ounces of corrosive sublimate in 25 gallons of water. One-half an ounce of the chemical is added after each treatment of 1½ hours investigations extending over a period of four years at the Dominion Laboratory of Plant Pathology, Charlottetown have demonstrated that the solution is ineffective after the third soak. The extra half ounce added after this period is wasted and would be profitably used in preparing a new solution. Furthermore, it has been learned that the strength of the solution weakens rapidly in the presence of broken tubers and potato juice. Therefore, the source of trouble is to be avoided if success is expected. General precautions include the following: (1) Disinfect the corrosive sublimate in not less than one gallon of very hot water. (2) Treat only tubers free from dirt. Throwing water on the pile will help to avoid this difficulty. (3) Use two clean casks alternately. Plugs made of long sticks make it easy to drain the casks after each treatment. (4) Prepare new solutions after three treatments. (5) Do not treat in bags. (6) Use soft water if possible. Hard water weakens the solution. (7) Put treated seed in a clean place to dry permit rapid drying through several pairs of water on the treated tubers.

### COMPULSORY VOTE

TO BE CONSIDERED  
OTTAWA — Amendments to the Dominion Elections Act to provide for closed voting lists and for the appointment of returning officers are able to be drafted for consideration by the special committee of the house of commons which is revising the act. No conclusion was reached as to the questions of principle of yesterday's meeting. A proposal of D. M. Kennedy U.F.A. Peace River that the chief electoral officer should be held personally responsible for the integrity of returning officers was also embodied in draft amendments which were filed to be given consideration of a future meeting. New sections to provide for compulsory registration and compulsory voting at elections were also filed.

## Town and District Topics

BORN—To Mr. and Mrs. Pete Voros of Fabian, at the Wainwright municipal hospital on March 16th a son

This week sees a deal whereby Mr. V. G. Morton becomes the owner of the Jimmy Maynes property on Sixth avenue west.

Mrs. Goldworthy and Mrs. Gaul, both of Edmonton, but formerly of Wainwright are here on a short visit to Mrs. J. Reilford for a few days. They are both delighted with the progress of the town.

Mr. T. Madkins returned on Sunday from his winter's visit to his old home in England

Mr. Frank Stevens who has been in Winnipeg for a couple of weeks on business has now returned

Mrs. S. Bowerman is entertaining Mrs. E. Cummings from the city for a few days holiday

Mrs. E. Ogilvie and her young daughter are visiting at the home of Mrs. F. Culbertson for a short holiday

Although not looking any too "chipper" Mr. Jack Chynoweth is now around again after his recent sick spell.

The work on the actual brick and stone work of the new Federal building on Main street is now very nearly completed and the erection is sure to be a credit to our town. The interior work is proceeding apace, and it should not be very long before the building is put to use for the post office, customs house, and National park administration.

\*\*\* The Connaught chapter O.E.S. are putting on a big public card party in the Masonic Hall on Friday next March 22nd at eight o'clock sharp. A good time is assured and first-class prizes are awaiting YOU. Be on hand and have an enjoyable evening.

Away on business to the city Mr. W. Carsell returned home on Sunday.

The wonderful Commercial Grade basketball team started out again last Saturday for their usual string of victories by defeating the Calgary Ticks, 43 to 13 in the Provincial championship play-down

Having spent the winter with her folks in the Old Country Mrs. R. Robertson returned home on Thursday last following a pleasant holiday

Mr. A. Kent, of Aulburndale spent a few days in the city this week.

Dr. S. E. Wiley, who was away to the east with a carload of good horses has now returned home

Miss A. Fisher and her mother of Edmonton are here visiting friends

The new Chevrolet are sure moving out from the Forster showrooms these days. Last week Mr. Geo. Hynes purchased a coach model, while Mr. Roy Williams and Mr. Frank Laird both now possess new 1929 sedans

Sympathies are expressed with Mrs. R. J. Allan Roberts upon the recent death of her father Mr. J. A. Malone in London, Eng., at the age of 63 years. Mr. Malone was the producer of several of the famous Gilbert & Sullivan operas and other theatrical works of note.

\*\*\* A colored lady walked into an insurance office and asked if they wrote fire insurance. Upon being told they did she asked for a policy on her husband. The clerk replied "What you want is life insurance" as he reached for an application form. "I don't want life insurance on my husband, I want fire insurance. He has been fired four times in three weeks!" said the lady. We have no policy to fit this lady's case but we can insure your property so that your loss will be small in case of fire. Joe Welch; phone 57.

will never disappoint if it's done here. It will mean that your shoes will last longer, look better and give real foot comfort. That is because the leather we use is of the same high quality as the workmanship—a combination which means satisfaction and economy for you.

## KARMAN'S FOOTWEAR

2nd Ave. Wainwright

A boxing match has been arranged for April 3rd at the theatre between the "Curly Kid" of Irma, and Art Prudhomme, of Grouard, when no doubt a large number of the followers of this sport will be on hand to see the bout.

M. G. W. Campbell of Viking was here for a few days with Rev. N. Whitmore

Jasper Park Lodge is to open this year for the season on May 21st, while Minaki Lodge will commence business one month later. The Royal Canadian golf association will hold the Canadian amateur championships at the Jasper links from August 19th to 24th this year.

Mrs. J. Woollett, of Edgerton and Mrs. N. Whitmore of town are spending a few days in the city this week

The Vets Big Dance on Vimy Day at the theatre promises to be the best ever and all would be well advised to get their tickets for this event early

Mr. and Mrs. H. Coderre are here from Joliette, Que., on a visit to Mrs. Clara Messier

We are glad to learn that Mrs. F. Lush who has been very sick with pneumonia is now improving nicely at the hospital.

Miss Ivy Lilly is now employed on the books at the Karmann shoe store. This deal at home and hire at home policy is what solidifies a town

Mrs. Tom Hill of Greenhills who is a patient at the hospital is now much better

The choir of the United church were entertained at the manse on Friday evening last by the Rev. N. and Mrs. Whitmore

Mr. C. (Charlie) Higgins, of Winnipeg, and A. (Art) Smith of Montreal, both of the advertising staff of the C.N.R. stopped off last week on their return journey from the coast

The St. Luke's dramatic club, who played "She Stoops to Conquer" to a "vibrant audience on Friday last, played to a packed and enthusiastic crowd

Mrs. J. Edwards of Edmonton was here last week at the Patterson store demonstrating for the Paulin Chambers biscuit people.

A learned doctor declares that the brains of dead men reveal nothing. A caustic critic rises to remark that there are also a lot of live men in the same state!

A nice amount will be turned in to the funds of the C.W.L. as the result of the efforts of the members at the cooking sale on Saturday last

\*\*\* St. Andrew's L.A. will hold a sale of home cooking in the sample room of the Wainwright hotel on Saturday afternoon, March 23rd from 2.30 to 6 p.m. Afternoon tea will be served and all are invited.

The Wainwright Dramatic club has started their practices on "Caste" a melodrama which Director Bob Dunsmore will be producing in about a month or six weeks for play lovers here.

Mr. A. McQuaker who recently had blood poisoning in his hand is now better and back at work

### FARM FOR RENT

Advertiser has good farm for rent to responsible party. One Hundred acres ready for seed. Good House. Splendid well. Good barn for eight horses. Good stock proposition. Don't delay. See or phone

J. G. MORTON

Wainwright

### THE FLOUR MILL

is not "any old mill!" It is "our Mill"; "your Mill"; because it is "A Profit-Sharing Mill!"

Would not or would not ask you mothers to dress your little ones in Old Flour Sacks. That would be taking the cream and sugar and leaving you the sour milk and no money to buy clothes!

Buy your Flour at the Wainwright Mill and save money to buy yourself and little Mary Silk Dress etc. Our Flour Sacks make dandy dish towels

### Wainwright Flour Mill

Owned and operated by N. RICKER, the man who guarantees you absolute satisfaction.
